# DATA VISUALIZATION USING TABLEAU

## 1. Aim

To create a tourism performance dashboard in Tableau using a separate tourism dataset and present visitor trends, destination comparisons, revenue and customer satisfaction through interactive visualisations.

## 2. Algorithm

1. Open Tableau Desktop or Tableau Public.

2. Choose **Connect** → **Microsoft Excel** and open **Experiment_7_Tourism_Dataset.xlsx**.

3. Select the TourismData worksheet and open a new worksheet.

4. Check that Month, Destination and Region are treated as dimensions, while Visitors, Revenue_INR, Avg_Stay_Days and Satisfaction_Score are measures.

5. Create a line chart by placing Month on Columns and Visitors on Rows; keep months in calendar order.

6. Create a bar chart using Destination and Visitors to compare destination popularity.

7. Create a regional revenue bar chart using Region and Revenue_INR.

8. Create a destination satisfaction chart using Destination and Satisfaction_Score.

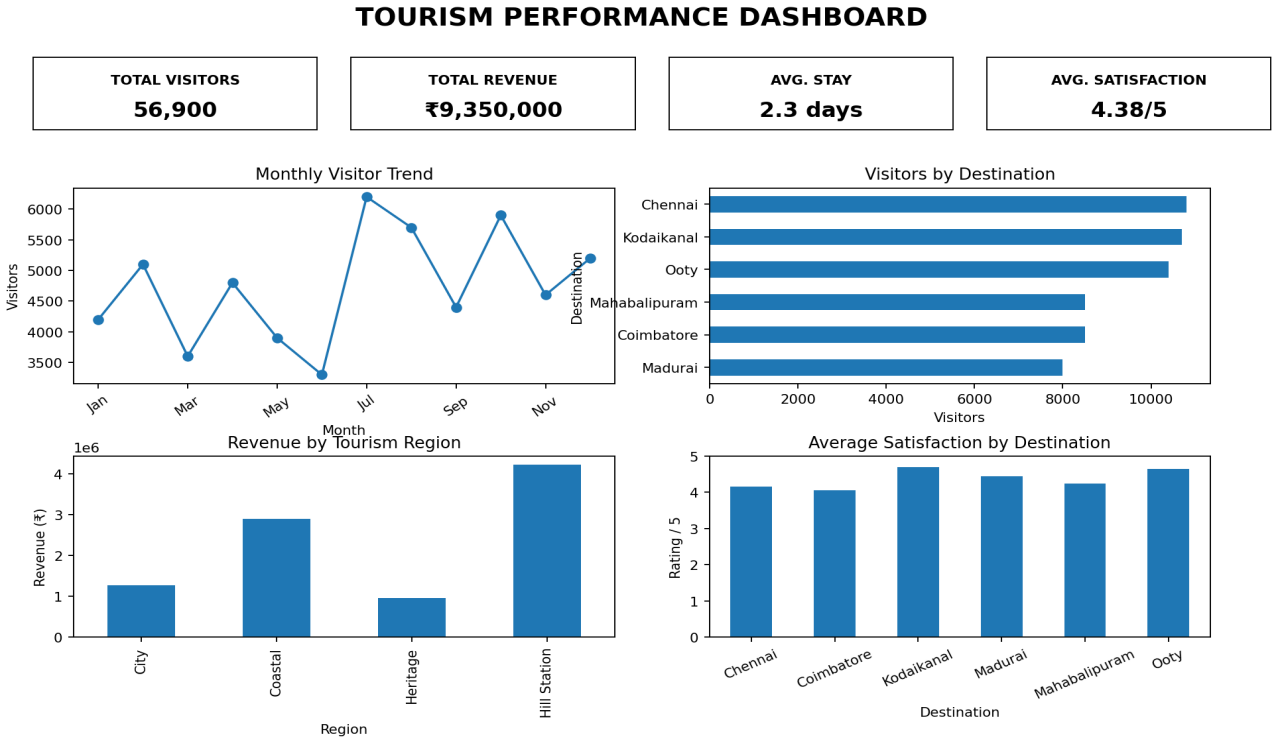

9. Create KPI sheets for total visitors, total revenue, average stay and average satisfaction.

10. Create a new Dashboard, drag the sheets onto it, arrange the KPI cards and charts, and add filters for Region and Destination.

11. Format titles, labels and currency; save the workbook as **Experiment_7_Tourism_Dashboard.twbx**.

## 3. Output – Sample Dashboard

The image below is a sample dashboard layout built from the separate tourism dataset. Recreate the sheets and dashboard in Tableau to produce the native workbook.

## 4. Interpretation

The dataset contains 56,900 visitor records across the listed months. Total recorded revenue is ■9,350,000, with an average stay of 2.27 days and an average satisfaction score of 4.38 out of 5. The dashboard compares monthly visitor movement, destination popularity, revenue by region and satisfaction by destination.

## 5. Result

Thus, a tourism analytics dashboard layout was designed for Tableau using a separate dataset. The dashboard combines KPI summaries and charts to support comparison of visitor activity, revenue and satisfaction.
